17. Next Steps

Appendix

1. Executive Summary

IEC Telecom is an established satellite communications provider with a global presence. The current website contains valuable information but does not effectively communicate the company's scale, capabilities, or value proposition. This audit identifies usability, navigation, accessibility, and visual design issues that impact user confidence and lead generation.

Top Findings

- Desktop navigation hides core offerings behind a hamburger menu.
- Visual inconsistencies reduce first impressions.
- Homepage lacks a clear conversion-focused hierarchy.
- Accessibility issues reduce readability and WCAG compliance.
- Footer provides limited navigation for a global enterprise website.

2. Project Context

Business Objectives

- Present IEC Telecom as a modern global satellite communications leader.
- Improve discoverability of products, industries and Starlink solutions.
- Increase enquiries through better user journeys.
- Create a scalable design system.
- Improve accessibility and SEO.

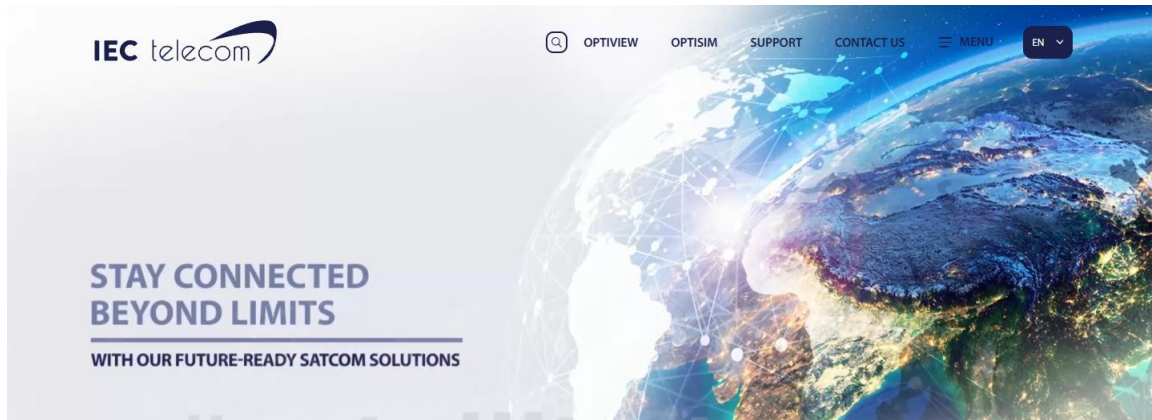

3. Audit Methodology

The website was evaluated using heuristic analysis, accessibility checks (WCAG 2.1 AA), content review, information architecture analysis and competitive benchmarking.

4. Current State Assessment

Overall first impression is positive due to strong imagery, however several usability and design issues reduce the perceived quality of the experience.

Priority Issues

- P0: Core offerings hidden behind menu.
- P0: News section contrast failure.
- P1: Header alignment and visual polish.
- P1: Weak homepage CTA hierarchy.
- P1: Minimal footer navigation.

DIGITALISATION ENABLED BY SATELLITE NETWORK MANAGEMENT SOLUTIONS AND SATELLITE COMMUNICATION SERVICE

IEC Telecom is an international satellite communication service operator. We offer industry-leading satellite communication services to governments, public institutions, business enterprises, and individuals across the world. Our comprehensive suite of services includes satellite communication service provision and satellite communication providers, enabling seamless connectivity even in the most remote locations.

We enable digitalization for the maritime industry as well as remote units on land, where GSM coverage is not available. With 25+ years of expertise in mobile and fixed satellite communications technology, IEC Telecom is well-positioned to supply reliable, high-quality, innovative satellite communication products and solutions to both institutional and individual customers all over the world, whether at sea or in remote areas.

IEC Telecom is a privately owned corporation with consistently strong financial performance.

Lets Talk

WHY IEC TELECOM?

IEC Telecom has long-standing business relationships with the key global and regional satellite communication operators. We support international organisations and offer a wide variety of area plans for customers with a localised business.

5. Key Findings

The audit identified several high-impact issues that directly affect user experience, discoverability, accessibility, and overall brand perception.

Priority	Finding	Business Impact
P0	Core solutions hidden behind desktop hamburger menu	Lower discoverability and lead generation
P0	Featured News fails WCAG contrast	Poor readability and accessibility risk
P1	Header alignment inconsistencies	Reduced trust and visual polish
P1	Homepage lacks clear CTAs	Lower conversion potential
P1	Minimal footer navigation	Poor wayfinding and SEO

6. User Experience & Navigation

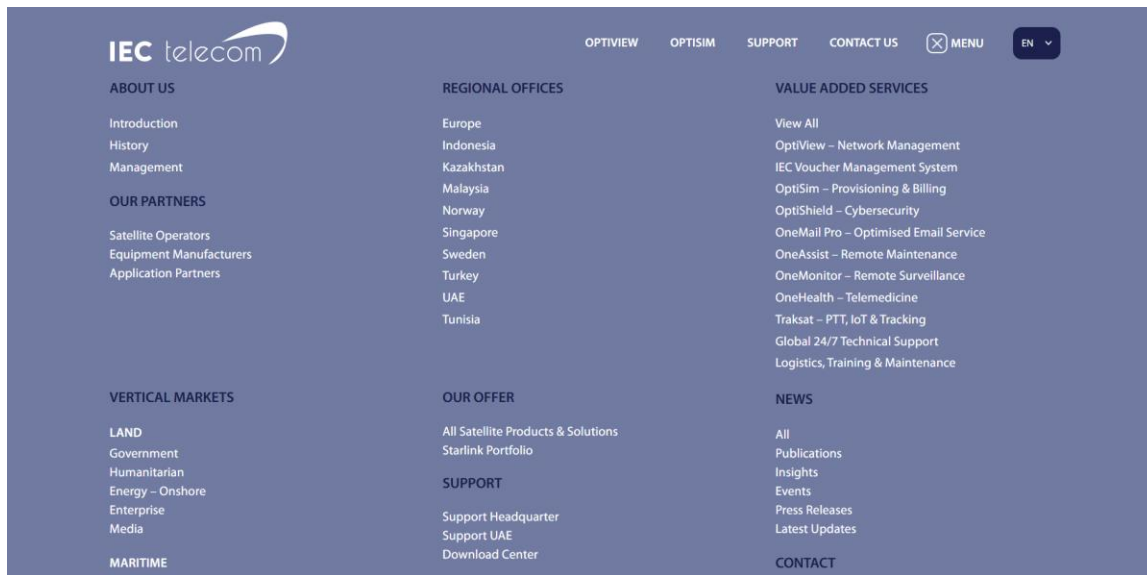

Finding 01 — Desktop Navigation

The desktop experience relies on a hamburger menu to expose the majority of the site's information architecture. This approach is uncommon for enterprise B2B websites and increases the effort required to discover key offerings.

- Critical pages require additional interaction.
- Users must scan long lists of links.
- Products, industries and Starlink are hidden.
- Support and Contact appear duplicated.

Recommendation

- Replace the overlay with a structured mega menu.
- Expose Solutions, Industries and About in the primary navigation.
- Keep client portals in the utility navigation.

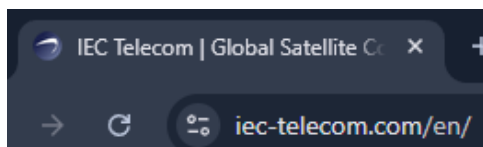

7. Visual Design & Brand Presentation

Header & Branding

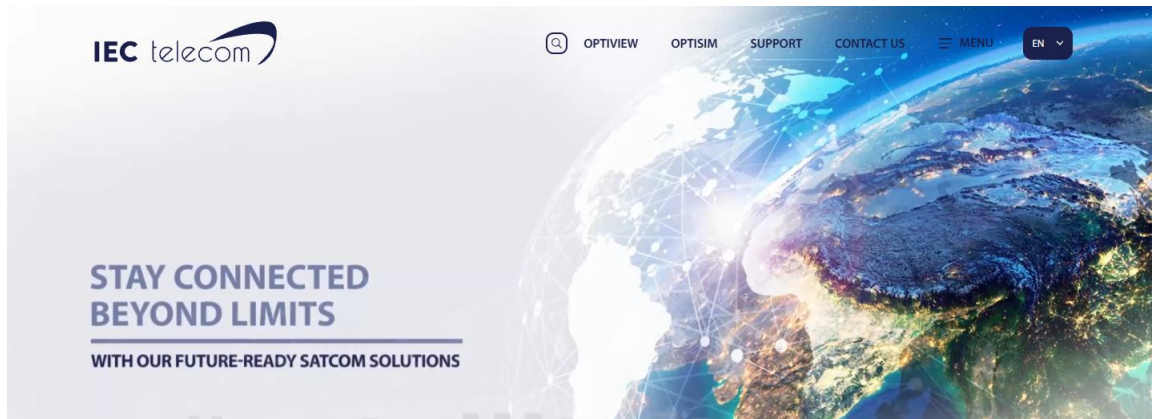

The overall brand is strong, however the header alignment and decorative treatments reduce perceived quality.

- Align logo and navigation vertically.
- Use a flatter, cleaner header.
- Introduce a consistent spacing system.
- Replace gradient favicon with simplified mark.

8. Homepage Strategy

Hero Section

- Headline should communicate value within 5 seconds.
- Introduce two primary CTAs.
- Support messaging with measurable proof points.

Content

- Reduce long-form copy.
- Improve hierarchy using cards and icons.
- Shorten H1 and improve SEO.

CONTACT US

First Name...	Last Name...	Company...
+1 - 201-555-0123	Email...	Country ▼
Interest ▼	Message...	How did you hear about us? ▼

☐ I'm not a robot
 

Recommendation

Move the contact form to a dedicated Contact page and replace it on the homepage with a focused call-to-action panel.

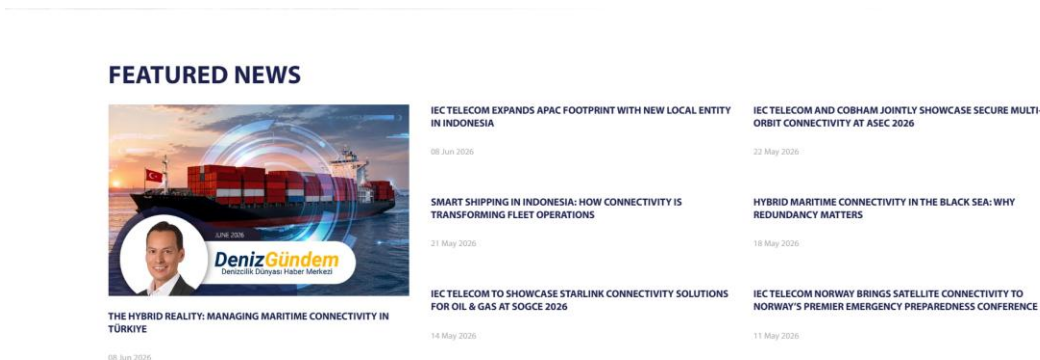

9. Footer Review

- Expand to a five-column sitemap footer.
- Include company, solutions, support and offices.
- Improve accessibility of social icons.
- Update copyright automatically.

10. Accessibility & Compliance

Accessibility is fundamental for enterprise websites. The current implementation presents several issues that may reduce usability for users with visual, cognitive, or motor impairments while also affecting overall content readability.

Observed Issues

- Low text contrast within the Featured News section.

- Placeholder-only form labels reduce accessibility.
- Minimal semantic cues and icon labels.
- Long content blocks reduce readability.

Recommendations

- Meet WCAG 2.1 AA contrast requirements.
- Provide visible labels for all form fields.
- Improve heading hierarchy.
- Perform automated and manual accessibility testing before launch.

11. Competitive Landscape

Leading B2B satellite communications providers consistently expose solutions, industries and products directly within their primary navigation. Their homepages focus on concise messaging, strong calls-to-action and structured information architecture.

Area	IEC Today	Industry Practice	Opportunity
Navigation	Hidden behind menu	Visible mega-menu	High
Hero	Generic messaging	Outcome-driven	High
Footer	Minimal	Full sitemap	High
Accessibility	Mixed	WCAG AA	Medium
Homepage	Long copy	Scannable sections	High

12. Recommended Solutions

Area	Recommendation	Priority
Navigation	Introduce two-row navigation with mega menus	P0
Header	Refine spacing and alignment	P1
Homepage	New hero, CTA strategy and trust indicators	P1
Footer	Five-column enterprise footer	P1
Accessibility	WCAG 2.1 AA compliance	P0
Content	Reduce copy and improve SEO	P2

13. Proposed Information Architecture

A simplified information architecture improves discoverability and supports key user journeys.

- Home
- Solutions
- Industries

- Products & Services
- About IEC Telecom
- News & Insights
- Support
- Regional Offices
- Contact

Primary User Journeys

- Prospective customer → Solution → Contact Sales
- Existing customer → Support / Client Portal
- Partner → Partnership Information
- Media → News & Press

14. Design Direction

The proposed design language should communicate trust, innovation and enterprise reliability while simplifying navigation and content consumption.

Visual Principles

- Clean white layouts with navy accents.
- Consistent spacing using an 8px grid.
- Modern typography hierarchy.
- Flat interface elements with restrained use of gradients.
- Professional photography focused on maritime and enterprise connectivity.

Component Library

- Primary and secondary buttons
- Navigation and mega menu
- Content cards
- Statistics panels
- Accessible forms
- Enterprise footer

15. Implementation Roadmap

A phased implementation minimizes risk while allowing IEC Telecom to realise measurable improvements early in the project.

Phase	Duration	Deliverables
Phase 1	Weeks 1-2	Header alignment, footer, contrast fixes, favicon
Phase 2	Weeks 3-6	Navigation redesign, mega menu, mobile navigation
Phase 3	Weeks 7-10	Homepage redesign, design system, content improvements
Phase 4	Ongoing	Performance optimisation, SEO, accessibility QA

16. Investment & Phasing

The following breakdown is intended as a planning framework and should be refined following stakeholder approval.

Phase	Scope	Estimated Effort	Priority
1	Quick Wins	1-2 Weeks	High
2	Navigation & IA	2-4 Weeks	Critical
3	Homepage & Design System	4-8 Weeks	High
4	Optimisation & Support	Ongoing	Medium

17. Success Metrics

The redesign should be measured against defined business and usability metrics.

Category	Target KPI
Usability	Reduce time to key content by 50%
Engagement	Increase pages/session
Conversion	Increase contact submissions
SEO	Improve Core Web Vitals and organic traffic
Accessibility	Achieve WCAG 2.1 AA compliance
Brand	Improve perceived trust and professionalism

18. Next Steps

- Review findings with key stakeholders.
- Approve the proposed information architecture.
- Confirm branding assets and design direction.
- Begin Phase 1 implementation.

- Validate designs before development.
- Conduct usability and accessibility testing before launch.

Appendix A - Current Menu Inventory

A detailed inventory of the current navigation structure should be maintained to support content migration and information architecture planning.

Appendix B - Naming Inconsistencies

Current	Recommended	Reason
Yachting	Superyachts	Consistency
humanitarian	Humanitarian	Capitalisation
Energy - Inland	Energy - Onshore	Clearer terminology
OPTISIM	OptiSim	Brand consistency

Appendix C - Accessibility Checklist

- Verify colour contrast.
- Review keyboard navigation.
- Validate screen reader compatibility.
- Use visible form labels.
- Check semantic heading hierarchy.
- Provide alternative text for images.

Appendix D - Glossary

Term	Definition
IA	Information Architecture
CTA	Call To Action
WCAG	Web Content Accessibility Guidelines
UX	User Experience
UI	User Interface
SEO	Search Engine Optimisation

Thank You

Thank you for reviewing this UX/UI Audit and Strategic Recommendation report.

This document is intended to serve as the foundation for a modern, scalable and user-focused redesign of the IEC Telecom website.
